

## Note 1

Hover over function of ward name to give the description of the ward - for example 12A - Surgical & Orthopaedics.

## Note 2:

Static bed number - this is actual bricks and mortar bed spaces.

## Note 3:

Beds open is a manual field with a drop down box to identify what the reason is for bed reduction.

Drop down inclusive of:

- >Platform matches activity
- >insufficient staffing.
- >Maintenance/infrastructure
- >safety risks/Acuity
- >Infection Control
- >Internal emergencies
- >seasonal adjustments/financial/reconfiguration

## Note 4:

Pulled from source admission data.

## Note 5:

Add on patients - OPD conversion to inpt, HITH returning, add on to the Emergency patients -

Manual field - Press the + sign to generate a pop up on the ward

Note 6: Manual field - from the bed meetings

Note 7: when a patient is discharged in HBCIS it captures on the actual discharge calculation

Note 8:

The capacity colour which is worked out from the open/available beds /occupied beds - corresponding to the statewide capacity colours TBC.

Note 9:

I would like a pop out box when you hover over the admission numbers that are in each ward... to show a grid view of patients electively booked into that ward - this applies to IHT admissions also.

Note 10:

The Bed manager chat function is a Teams communication channel.

Note 11: Clicking on the Elective admission tile pops out a weekly planner for elective admission per ward.

Note 12:

The user needs to be able to scroll to and from the Bed Management page to the allocations page.

## Note 1

Hover over function of ward name to give the description of the ward - for example 12A - Surgical & Orthopaedics.

## Note 2:

Static bed number - this is actual bricks and mortar bed spaces.

## Note 3:

Beds open is a manual field with a drop down box to identify what the reason is for bed reduction.

Drop down inclusive of:

- >Platform matches activity
- >insufficient staffing.
- >Maintenance/infrastructure
- >safety risks/Acuity
- >Infection Control
- >Internal emergencies
- >seasonal adjustments/financial/reconfiguration

## Note 4:

Pulled from source admission data/HBCIS - to show patients in bed

## Note 5:

Elective admissions pulled from HBCIS lists/surginet? - patient details populate in a tab format - to allow drag and drop if the bed manager needs to reallocate beds due to capacity. Clicking on this tile allows the user to print a HBCIS list of elective admissions if required. The orange "Search by Date" button allows the user to search for an elective admission lists for future dates - to provide the user the elective admission numbers for future...tomorrow/week etc)

Note 6:

Patient information pulled from ED data platforms/Firstnet so the user does not have to go to leMR separately, the bed manager needs to have the ability to allocate beds on Firstnet from this screen.

"Search by date" function on the ED admission tile allows the user to search ED activity on a certain date, giving actual activity for past dates and predicted activity as per activity on the same day/time as previous years data.

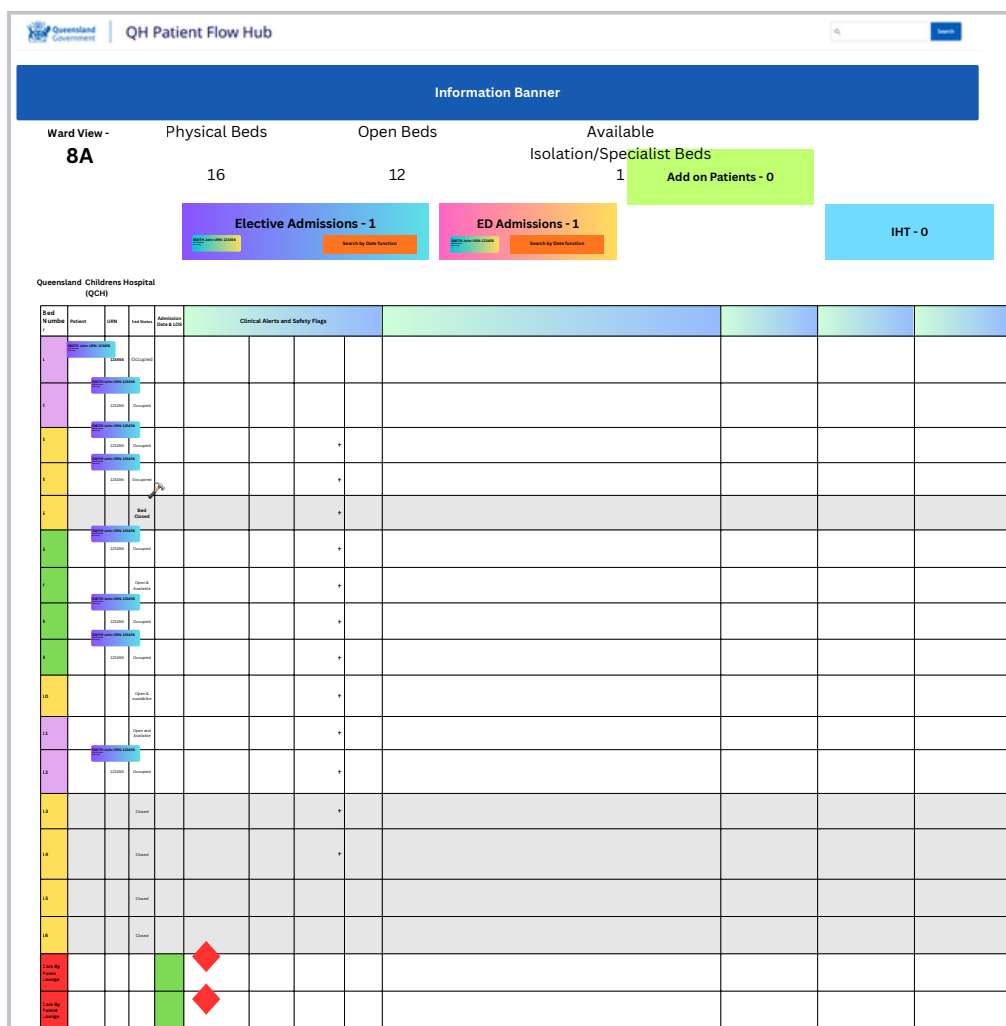

Note 7:

ED patient data populated in the same tab format as elective pts - to allow drag and drop.

Note 8:

Add on patients - OPD conversion to inpt, HITH returning, add on to the Emergency patients - Manual field - Press the + sign or the Add-on Patient Tile to generate a pop up box for completion (see example box) the user completes the Add-on pt details and clicks save - this populates in the same drag and drop format.

Note 9:

The ward view is an interactive page used by the wards and the Bed management teams. The ward team leaders need to be engaged in this page as they are the users that will fill in/complete/edit the page that feeds to the larger bed management platform.

We require drag and drop functionality.

Beds are clearly identified - to fit within the definitions of the bed types (there should be a universal colour attached to a specific bed to ensure consistency throughout the state).

Beds will be clearly numbered as per ward layout, clinicians can choose between a ward map view and a list/gris view.

Patient demographics will populate in the beds by a drag and drop function.

The pop-up calendar can schedule a bed closure - accessible for ward teams and the facilities team - can this replace the "logging of jobs" - for example if a room is damaged - I would like
